BBIT/BPTM

Busbar Insulating Tubing (5 – 36 kV)*

BBIT (5 – 36 kV)

Heavy-wall tubing for use on straight or bent bars where maximum clearance reduction or 36 kV insulation is required.

BPTM (5 – 24 kV)

Medium-wall tubing for use on straight or bent bars where some clearance reduction or 24 kV insulation is required. These heat-shrinkable tubes for straight and bent busbars are extremely flexible, allowing them to be easily positioned on busbars and quickly installed using a gas torch or oven. They have a high expansion ratio, so each size of tubing fits a range of busbar sizes. Both BBIT and BPTM tubing are ideal for original equipment assembly, and for retrofit applications where access to one end is available.

BBIT and BPTM tubings are also ideal for protection against accidental bridging caused by birds and animals. They are suitable for indoor and outdoor applications.

Product selection

BBIT should normally be used on the following busbar sizes

Product size	Rectangular bars L + T (mm)		Round bars D (mm)	
	min	max	min	max
BBIT 25/10	17	28	11	20
BBIT 40/16	28	45	18	32
BBIT 65/25	44	69	28	47
BBIT 100/40	69	102	44	72
BBIT 150/60	102	148	65	105
BBIT 175/80	133	196	85	125

Ordering information

Ordering description	Inside diameter (mm)		Wall thickness (mm)		UOM : roll of length (m)
	H min	h max	W nom	w min	
BBIT 25/10-A/U-4	25	10	1,6	3,6	25
BBIT 40/16-A/U-4	40	16	1,6	3,6	20
BBIT 65/25-A/U-4	65	25	1,6	3,6	15
BBIT 100/40-A/U-4	100	40	1,6	3,6	15
BBIT 150/60-A/U-4	150	60	1,6	3,6	15
BBIT 175/80-A/U-4	175	80	1,6	3,6	10

NOTE

W, H = as supplied w, h = after free recovery. Maximum longitudinal change after free recovery: ±5%. Maximum eccentricity: 35% (as supplied), 15% (after free recovery). Fit the larger size of BBIT if two sizes fit the required application.

Product selection

BBIT should normally be used on the following busbar sizes

Product size	Rectangular bars L + T (mm)		Round bars D (mm)	
	min	max	min	max
BPTM 15/6	12	18	6,5	12
BPTM 30/12	22	38	13,5	25
BPTM 50/20	36	65	22	43

BPTM 235/130-A/U-4	235	130	1,5	3,10	20

NOTE

W, H = as supplied w, h = after free recovery. Maximum longitudinal change after free recovery: ±5% -10%. Maximum eccentricity: 40% (as supplied), 15% (after free recovery). ≤ 75/30 10% ≥ 100/40 15%. Fit the larger size of BBIT if two sizes fit the required application.

Ordering/Application Information

- Select the appropriate catalogue number. Confirm selection with bus dimensions.
- *2. These products may be suitable for applications with higher voltages than those listed. Please contact your TE Connectivity representative for more information.
- Bolted connections require two layers of tubing or a fiber bolt pad.
- To environmentally seal the bus at each end of the BBIT tubing, order S-1085 sealant strip separately.
- To environmentally seal the busbar at each end of the tubing, use S1085 sealing mastic.
- Minimum continuous length is 4,5 meters.

HVBT

High Voltage Busbar Insulating Tape (5 – 15 kV)*

HVBT tape is an adhesive coated, high-voltage, heat-shrinkable, general-purpose tape for insulating straight and bent bars in retrofit applications where tubing cannot be used. In addition, HVBT easily insulates unusual connections and geometries in the factory or field.

HVBT tape is also ideal for protection against incidental/accidental bridging caused by birds and animals. HVBT may be suitable for higher voltage applications (see Ordering information #2 below). The HVBT adhesive layer fuses the tape layers but does not stick to bus or hardware, thus providing environmental sealing while allowing fast, easy removal.

HVBT tape may be used in applications up to 15 kV in accordance with ANSI/IEEE specifications and up to 36 kV in accordance with IEC specifications.

Rated to ANSI/IEEE C37.20-1987.

Section 1

Selection Information: dimensions in millimeters/meters

Bus Width		Recommended Product	HVBT length needed per Meter of busbar
 RECTANGULAR BUSBAR	25	HVBT-12-A (B20)	10,0
	50	HVBT-14-A (B10)	7,6
	75	HVBT-14-A (B10)	11,4
	100	HVBT-14-A (B10)	15,6
	150	HVBT-14-A (B10)	25,0
	200	HVBT-16-A (B10)	15,6

 SQUARE BUSBAR	25 x 25	HVBT-14-A (B10)	6,0
	50 x 50	HVBT-14-A (B10)	12,5
	75 x 75	HVBT-14-A (B10)	20,0
	100 x 100	HVBT-16-A (B10)	12,5
	150 x 150	HVBT-16-A (B10)	20,0

 ROUND BUSBAR	12	HVBT-12-A (B20)	5,0
	25	HVBT-14-A (B10)	5,0
	50	HVBT-14-A (B10)	10,0
	75	HVBT-14-A (B10)	16,7
	100	HVBT-16-A (B10)	10,0

Ordering/Application Information

1. Select the appropriate catalogue number for the application. Confirm selection with the following recommendations and HVBT tape dimensions:

HVBT-12-A is best for short lengths and small bus sizes.
HVBT-14-A is the most versatile width for general purpose use.
HVBT-16-A is useful for long lengths and larger bus sizes.

HVBT tape dimensions:

Catalogue Number	Roll Width	Roll Length
HVBT-12-A (B20)	25 mm	10 M
HVBT-14-A (B10)	50 mm	10 M
HVBT-16-A (B10)	100 mm	10 M

- *2. HVBT may be suitable for applications with higher voltage than those listed. Please contact your TE Connectivity representative for more information.

3. To environmentally seal the bus, order S-1085 sealant strips separately.
4. Recommended application is to wrap the tape around the busbar using a two-thirds overlap.
5. Bolted connections require two layers of tape.
6. Standard package:
HVBT-12-A (B20): 2 rolls/box
HVBT-14-A (B10): 1 roll/box
HVBT-16-A (B10): 1 roll/box
7. Continuous operating temperature: 90°C
8. Related test reports: EDR-5466, EDR-5422

HVIS

High Voltage Busbar Insulating Sheet (5 - 17,5 kV)

HVIS is an adhesive coated, heat-shrinkable sheet that shrinks in two directions to tightly conform to complex shapes. It is ideal for insulating busbar tees, elbows, and other connections where tubing or tape cannot be used. HVIS may also be used in conjunction with Raysulate electrical insulating tapes and tubings or alone to help protect against accidental bridging caused by birds and animals.

Selection Information: dimensions in millimeters/meters

Catalogue Number	Width	Length	Packaging
HVIS-05-(B3) NS	660	500	Sheet
HVIS-10-(B1) NS	660	10 m	Roll

Selection Information: dimensions in millimeters

Bus Width (mm)		Cut Size Needed	Number of Installations HVIS-05 Sheet	Per Sheet/Roll HVIS-10 Roll
 T CONNECTION	25	275 x 225	4	88
	50	325 x 250	4	78
	75	400 x 275	2	48
	100	450 x 325	2	44
	150	550 x 425	1	23
 ELBOW CONNECTION	25	275 x 175	4	112
	50	325 x 225	4	88
	75	375 x 250	2	52

	150	550 x 325	1	36

HVIS-Installation tools

Set of installation tools for insulation enhancement products (HVIS, SMOE)	
HVIS-TOOLS-01	spring clamps (12x), flat-steel bar 350 x 20 mm (2x), right angle steel bars 120 x 120 mm (8x)
HVIS-TOOLS-02	spring clamps (24x), flat-steel bars 350 x 20 mm (2x), right angle steel bars 120 x 120 mm and 160 x 160 mm (8 each), turning pair steel bars 200 x 40 mm (1x), vice-grap wrench (1x), hose clamps Ø 125 and Ø 160 mm (2 each)

Ordering/Application Information

- Select the appropriate catalogue number. Confirm selection with dimensions.
- Busbars should be insulated as close as possible to the bolted joint. Cut size should extend a minimum of 100 mm onto each leg of the joint before shrinking.
- The above table should be used as a guide only; experiment to confirm final cut size. Table is based on 15 mm bus thickness.
- To environmentally seal each leg of the bus, order S-1085 sealant strips separately.
- HVIS may be rated for applications up to 36 kV. Please contact your TE Connectivity representative for more information.
- Standard package:
HVIS-05: 3 sheets/box
HVIS-10: 1 roll/box
- Related test report: EDR-5175

BMOD

Busbar Insulation Connection Covers

Raychem cold applied busbar insulation covers Voltage Class 36 kV, Application range 50 mm (2"), 75 mm (3") and 100 mm (4").

PRODUCT DESCRIPTION

- The BMOD family of busbar covers are designed to protect and insulate energised busbars from flashover due to accidental contact and are useful in confined spaces.
- They can be used on bare busbars, switchgear connections, substations and other electrical equipment.
- Cold applied half-shells are fixed with easy push fit latches for retro-fit installation.
- Compatible with all other TE and Raychem heatshrink tubes and tapes.

APPLICATIONS

- Allows equipment designers to reduce air spacings between busbars when used in conjunction with TE and Raychem heatshrink tube or tape.
- Provides flashover protection up to 36 kV on the Medium Voltage systems, Red covers.
- "Tee", "Elbow" and "Straight" connection. 1 x 1 busbar combinations.
- Maximum bar thickness 12 mm (1/2").
- Pack size 12.

FEATURE AND BENEFITS

- Made from Raychem BCIS Sheet.
- Suitable for indoor and outdoor use.
- Excellent anti-tracking performance.
- Operating temp rating up to +105°C.
- Compatible with BBIT, BPTM and HVBT.
- Excellent U.V. performance.

Raychem BMOD Insulation Covers

Part Number Description		
HV	Medium Voltage system	36 kV
050	Busbar size x 12 mm Max	50 mm
075		75 mm

00	Hand arrangement	Straight
01		Right Hand
02		Left Hand
(B12)	Pack size	12

BMOD-HV-100-L11-01 (B12)

BMOD Cover for HV, 100 mm x 12 mm single busbar, "L" Right Hand Angle, pack of 12

BMOD-HV-050-T11-00 (B12)

BMOD Cover for HV, 50 mm x 12 mm single busbar, "Tee" Shape, pack of 12

Busbar Insulation Technical Data

This table indicates clearance differences for rectangular busbars without and with various Raysulate electrical insulation products. These spacings are derived from BIL, AC-withstand, DC-withstand, and discharge-extinction tests on a limited number of busbar configurations insulated with Raysulate electrical insulation products.

Due to the wide range of possible busbar geometries, these spacings should not be adopted without actual testing by the user. Sharp electrodes and unusual geometries will require wider spacings. Always consider the smallest gap is likely to be at bolted connection positions.

NOTE Phase-to-phase distances are reduced more than phase-to-ground distances because it is assumed that each phase is insulated.

Selection Information: dimensions in millimeters

System Voltage kV	BIL kV	Uninsulated Clearance (Indoor)		BBIT Clearance (Indoor)		BPTM, HVBT, and HVIS Clearance (Indoor)	
		A*	B**	A*	B**	A*	B**

35	150	320	240	140	190	165	200

* Phase-to-phase
** Phase-to-ground

Recommended Guide Specification

Please feel free to use the following in your design specification:

Insulation for energized bus components and connections shall consist of tubing, tape, and sheets that are factory-engineered to meet applicable switch gear performance requirements.

All insulation components shall be fabricated from flexible, crosslinked, heat-shrinkable polymeric materials formulated to provide high dielectric strength, adequate thermal endurance at bus operating temperatures, and tracking and erosion resistance.

The insulation materials shall contain no halogen compounds and be compatible with other commercial, factory-installed bus insulation materials. Materials shall be installable at temperatures as low as -40°C. Adhesive coatings on tape and sheet products shall not adhere to metal surfaces, thus permitting easy re-entry to the connections.

The insulation supplier shall furnish technical data to document design and performance to these requirements and functional testing of the complete insulation system in accordance with ANSI/IEEE C37.20.

BISG | BISG-24

Bus Isolation Squirrel Guard

BISG-60/115-02
installed on switch

BISG-24 energized install

This isolation guard prevents animal-caused outages in electrical sub-station equipment.

RELIABLE OUTAGE PREVENTION

BISG discs have been successfully eliminating outages caused by squirrels, raccoons, opossums, cats, and other animals in substations for years. The guards are designed to allow for excellent visibility of switch blades and other components through the guard while providing mechanical resistance to power arcs and high winds.

HIGH PERFORMANCE MATERIAL

Superior high voltage outdoor materials are used in the BISG guard design. The rugged, track resistant, UV-stable polymer ensures long-term performance even in the most extreme environmental conditions.

FASTER, EASIER INSTALLATION

The BISG-24 guard can be installed on energized equipment by one person. The new design incorporates a wedge device which makes hot-stick installations on vertical and horizontal mounted insulators quick and easy.

EXPANDED SIZE RANGE

The BISG guard family fits insulator core diameters ranging from 25 mm to 125 mm from the factory. The “grill” type design allows easy field modifications for even larger diameters (see your local TE representative for details).

The BISG guard can also have its outside diameter reduced by trimming along the grill ribs. This will allow the guard to fit in tight phase-to-phase insulator applications.

BISG-60/115-02
installed on bus

BISG-24	Insulator Core Diameter Range	Overall Product Diameter*	Color	Installation
Catalogue Number				
BISG-24-01 (B10)	62 - 125	610	Red	One stick (energized)

* Overall product diameter can be trimmed down to 410 mm diameter

Ordering/Application Information

- Standard package: 10 BISG-60/115-02 | 10 BISG-24-01 assemblies per box. (One BISG will install on one insulator).
- Related test report: EDR-5310, EDR-5517-Bus Insulator Squirrel Guard (BISG-24-01).

BCAC

Bushing Connection Animal Cover

BCAC-5D/8

These insulating covers are designed to prevent animal caused outages on bushings ranging from 15 to 36 kV. They fit a wide range of bushing sizes and are suitable for substation and distribution applications.

RELIABLE OUTAGE PROTECTION

TE's insulating covers have been successfully eliminating outages from all types of animals for years. These covers have been designed to provide the same great protection with enhanced features.

FAST AND VERSATILE INSTALLATION

These BCACs are fast and easy to install. No trimming is required and they fit a wide range of bushing skirt diameters (see chart below). If needed, they can be installed on energized equipment as well. The feathered edges of these covers allow for conductor exits in both vertical and horizontal directions. These same edges act as thermal scan sites for true temperature evaluation of the covered hardware.

HIGH PERFORMANCE MATERIAL

Superior high-voltage outdoor materials are used in the BCAC cover design. The rugged, non-tracking, UV-resistant polymer ensures long-term performance even in the most extreme environmental conditions.

BCAC-BYPASS

BCAC-IC

Bushing Connection Inspection Cover

BCAC-IC-8D/18

This insulating cover is designed to prevent animal caused outages on breaker and transformer bushings ranging from 15 to 36 kV.

FAST AND VERSATILE INSTALLATION

The cover is easily installed around bushings and connections by wrapping the double hinged design around the insulator's top skirt and snapping it in place with a robust latching mechanism. The cover allows conductors to exit from both the top and side interfaces without the need to trim the cover. The design allows for visible inspections of oil fill levels on transformer bushings as well.

HIGH PERFORMANCE MATERIAL

Superior high voltage outdoor materials are used in the BCAC cover design. The rugged, non-tracking, UV resistant, high temperature polymer ensures long-term performance even in the most extreme environmental conditions.

BCAC-IC Installed on Bushings

Ordering/Application Information

1. Related test reports: EDR-5514, UVR-8209

The BCAC-IC covers are also kitted for voltage regulator applications.
The kit includes two bushing covers and a center arrester cover.

BCIC

Bus Connection Insulating Covers

BCIC covers are designed to protect energized conductors or busbars from flashovers due to contact from birds, squirrels and other wildlife. BCIC parts are made from a UV stable, track resistant, high performance TE Connectivity material to ensure years of reliable service.

A variety of different shapes and sizes are available to cover circuit breaker bushings, bus standoff insulators, capacitors, transformer bushings, voltage regulators, potential transformers and more.

The parts shown are the most commonly used. Many other parts for different equipment arrangements are available. See your local TE representative for more options.

Installation can be made quickly in the field by trimming the entry and exit holes to the required dimensions. The BCIC covers can be re-entered for other maintenance needs and then reused, thus lowering overall lifetime costs.

MVFT

Medium Voltage Fusion Tape

Medium Voltage Fusion Tape (MVFT) is a self amalgamating tape that provides insulation enhancement and protection against accidentally induced discharge. MVFT tape is designed to combine the integrity of a silicone polymer with the versatility of a wraparound product.

FAST AND VERSATILE INSTALLATION

MVFT tape is quick and easy to install. Upon application the tape amalgamates the over-lapped layers together, producing a complete seal. A single layer of MVFT tape, two-thirds overlapped, will provide AC voltage withstand (flashover protection) to at least 15 kV increasing to 35 kV if a second layer is applied. Although MVFT tape will stick to itself and other insulating materials, it will not adhere to metal or porcelain allowing easy removal for maintenance.

FEATURES

MVFT tape is compatible with all other products in the Raysulate MV Insulation enhancement system. This fusion tape is suitable for both Indoor and outdoor use. MVFT tape exhibits non-tracking properties and possesses a continuous operating temperature up to 90°C.

APPLICATIONS

MVFT tape offers a simple and effective solution to the problems of retrofit insulation of busbars particularly where existing equipment cannot be dismantled. It can be used for indoor and outdoor applications and is easily installed over a wide variety of shapes including complex connections.

MVCC

Medium Voltage Conductor Covers for Outage Prevention

Medium Voltage Conductor Covers (MVCC) provide high quality electrical insulation for substation leads and jumpers. These covers are made from a non-tracking silicone material that is suitable for harsh medium voltage outdoor environments. MVCC covers are split for easy installation.

The MVCC's flexibility allows installation on tight bends which makes it ideal for substation applications.

These covers are designed to protect energized conductors from flashovers due to contact from birds and animals. The Medium Voltage Conductor Cover is suitable for applications up to 25 kV phase to ground. They are currently available in four sizes that will fit conductors with diameters ranging up to 44 mm.

MVLC

Medium Voltage Line Cover (5 - 36 kV)

The MVLC cover is a cold-applied wrap-around cover that provides retrofit insulation for overhead conductors to help prevent electrical outages caused by incidental contact from tree branches or wildlife.

The MVLC cover may be applied selectively on problem spans to avoid costly conductor replacement. Installation is possible on energized lines utilizing the MVLC tool which attaches directly to the overhead conductor and remains stationary in a single location. The tool may be manually or automatically operated, using a powered drill. The tool forms, closes, and feeds the MVLC cover along the conductor with speed and consistency. The MVLC hand tool allows for quick installation on short lengths of conductors, especially in substations.

NOTE Installation on energised line must only be carried out by "Live Line" trained installers

Birdcap Protection Covers

The Birdcap family of insulating covers are specifically designed to protect birds from causing flashovers during take-off, landing and perching on energised conductors at crossarm and poletop insulators. This also protects the network from outages and potential damage to equipment and conductors.

Birdcaps are available in three materials, from a high performance, UV stable, track resistant Raychem material to a fit for function M.V. and Low Pollution environment material to a UV stable grade clear material for enhanced clarity during aerial visual inspection in remote locations.

A variety of different shapes and sizes are available to cover different support insulator/insulator interfaces at transmission and distribution voltage classes.

Installation can be made quickly in the field by Cable-Ties, Latches, Screws or Hotsticking on live conductors.

Covers for overhead conductors

Material Options	Features	Benefits	Test Report
Raychem Red: UV stable, track, chemical and pollution resistant. Crosslinked for high thermal stability. Flexible for curved installation at double insulator pole arrangements	Crosslinked Excellent TERT Good Dielectric Strength UV Stable Flexible	25 years lifetime in harsh environment of high pollution, high sun exposure and low rain fall	EDR-5385
LDPE Black: Suitable for MV networks in less harsh environments.	Good TERT Good Dielectric Strength Flexible	Meets requirements for less harsh environment. ~15 years service life	PPR-2958
Polyester Clear: UV Stable grade for easy inspection of connections	High Dielectric Strength See through	~10 years service life	PPR-2959

BCIC

Dead End and Suspension Clamp Covers

BCIC covers for Dead End connection points and Suspension Clamps protect energised lines from perching, landing and nesting birds.

When used together with an overhead line cover they combine to make an effective insulation enhancement system against accidental phase-phase or phase-ground touches.

They use the same high performance material as the Birdcaps and substation BCIC's and are suitable for MV Poles and HV Towers.

Distribution Covers for Animal Protection

BCAC-G-5D/8-01
BCAC-G-AR-5D-2

These insulating covers are designed to prevent bird caused outages on distribution equipment ranging from 15 to 36 kV. Covers are available for terminations, reclosures, lightning arresters, and fuse cutouts.

TRANSFORMER BUSHING

The BCAC-4D/13 - 2 covers a wide variety of termination sizes. The cover is easily installed on top of the first termination skirt. No trimming is required and the cover fits terminations ranging in size from 45 to 380 mm². Extensive testing has ensured that the cover will not damage or deteriorate the terminations.

FAST AND VERSATILE INSTALLATION

These BCACs are fast and easy to install. No trimming is required and they fit a wide range of bushing skirt diameters. If needed, they can be installed on energized equipment as well. The feathered edges of these covers allow for conductor exits in both vertical and horizontal directions. These same edges act as thermal scan sites for true temperature evaluation of the covered hardware.

BCAC-4D/13-2

LIGHTNING ARRESTER CAPS

Distribution surge arrester caps protect against unwanted animal and bird outages. The unique design covers the first skirt which improves the level of protection. The cap is easily installed and attaches to both the stud and the conductor so that it will stay secure even in high winds. Three different covers are available.

FUSE CUTOUTS

The BCAC-G-CUTOUT hot-stickable insulating cover is designed to protect fused cutout switch applications up to 25 kV. The unique omega shaped attachment area easily clips onto the cutout insulator between the first and second skirt. The insulated conductor is captured securely as well to ensure retention even in high winds. Two different covers are available for 100 and 200 amp applications.

BCAC-G-CUTOUT-100-01

HIGH PERFORMANCE MATERIAL

Superior high voltage outdoor materials are used in all of these BCAC cover designs. The rugged, track resistant, UV resistant polymer ensures long-term performance even in the most extreme environmental conditions.

AFD

Avian Flight Diverter

TE Connectivity's Avian Flight Diverter is designed to aid birds in seeing overhead lines and avoid collisions. By drawing attention to the lines earlier, large fowls such as geese and swans will have enough time to change their direction and avoid potentially fatal consequences.

The Avian Flight Diverter is compatible with all types of conductors and is RFI free to 69 kV. The diverter incorporates a high visibility prismatic reflecting strip that allows birds to see the diverter even in low light and fog conditions. A glow in the dark strip is also used to extend the diverter's effectiveness at dusk, for birds returning to their roosts. The materials used in the diverter are extremely UV stable, track resistant, and are designed to give superior performance for many years of service.

FAST AND EASY INSTALLATION

The diverter is easily installed with a hot stick on conductors ranging from diameter 4 to 22 mm.

KEY FEATURES

- Hot stickable, easy to install
- Range taking 4 to 22 mm diam.
- High reflectivity
- Glow strip for dusk
- Removable

LVIT

Low Voltage Insulating Tubing (0 - 1 kV)

PRODUCT DESCRIPTION

- Raychem black, medium wall, flame retarded heat-shrinkable tubing LVIT is suitable for insulating busbars up to 1 kV.
- This highly flexible tubing can be used on a variety of curved and bent busbars of both circular and rectangular cross-section.
- Raychem tubing LVIT can be easily installed in a factory environment using an oven or in the field using a gas torch or hot air.
- Raychem tubing LVIT is manufactured in UV resistant material, making it suitable for both indoor and outdoor applications.

APPLICATIONS

- Raychem tubing LVIT is suitable for both enclosed and exposed busbars and for connections in switchgear, substations, motor control centers and other electrical equipment.

FEATURES/BENEFITS

- Compatible with all other products in the Raychem low voltage insulation range.
- Flame retarded.
- Continuous operating temperature rating up to 105°C.
- High shrink ratio reduces inventory and simplifies product selection.
- Suitable for indoor and outdoor applications.
- Good thermal emissivity and contact with busbars means no derating is needed.
- Can be stored indefinitely at temperatures up to 50°C without loss of performance.
- UL approved.

LV BMOD

Busbar Insulation Connection Covers

Raychem cold applied busbar insulation covers Voltage Class 1 kV, application range 50 mm, 75 mm and 100 mm.

PRODUCT DESCRIPTION

- The BMOD family of busbar covers are designed to protect and insulate energised busbars from flashover due to accidental contact in confined spaces.
- They can be used on bare busbars, switchgear connections, substations and other electrical equipment.
- Cold applied half-shells are fixed with easy push fit latches for retro-fit installation and can be removed and reused.
- Compatible with all other TE and Raychem heatshrink tubes and tapes.

APPLICATIONS

- Allows equipment designers to reduce air spacings between busbars when used in conjunction with TE and Raychem heatshrink tube or tape.
- Provides flashover protection for up to 1 kV on the Low Voltage systems, Black covers “Tee”, “Elbow” and “Straight” connection.
- 1 x 1 Busbar combinations. Maximum bar thickness 12 mm.
- Pack size 12.

FEATURE AND BENEFITS

- Made from Raychem LVBS Sheet.
- Suitable for indoor and outdoor use.
- Flame Retarded.
- Operating temp rating up to +105°C.
- Compatible with LVIT and LVBT.
- Low Toxicity performance.
- Can be easily removed for inspection and maintenance.

LVIC

Low Voltage Insulation Covers

PRODUCT DESCRIPTION

- The LVIC range of insulating covers consists of a number of pre-formed insulating shapes for multiple bar connection arrangements.
- They can be used on bare busbars, switchgear connections, substations and other electrical equipment.
- Cold applied half-shells are fixed with easy push fit latches for retro-fit installation.
- Compatible with all other TE and Raychem heatshrink tubes and tapes.

APPLICATIONS

- Allows equipment designers to reduce air spacings between busbars when used in conjunction with TE and Raychem heatshrink tube or tape.
- Provides flashover protection for up to 1 kV on the Low Voltage systems, Black covers.
- "Tee" and "Elbow" connection.
- Up to 4 x 4 Busbar combinations.
- To fit bar size 75 mm.
- Pack size 12.

FEATURES/BENEFITS

- Made from Raychem LVBS sheet.
- Suitable for indoor and outdoor use.
- Flame retarded.
- Operating temp rating up to +105°C.
- Compatible with LVIT and LVBT.
- Low Toxicity performance.
- Can be easily removed for inspection and maintenance.

LVBC

Low Voltage Bushing Cover

The LVBC range of insulating covers are designed to fit the LV Bushings on transformer according to EN-50386.

Made from the same Flame Retarded, Indoor/Outdoor material as LVIT heatshrink tube, LVBT heatshrink tape and the BMOD/LVIC products.

The covers are hinged, with push fit latches for easy cold applied fitting. This allows easy removal for inspection and then reuse.

HVCE

High Voltage Creepage Extenders

Heat-shrinkable creepage extenders help to increase the flashover performance of insulators by reducing the surface electrical stress and leakage current and increasing the creepage length of the insulators. The extenders are designed to be resistant to conventional spray washing techniques and will withstand most normal handling, abuse, and extreme weather conditions.

Ordering/Application Information

1. Select the appropriate catalogue number. Confirm selection with insulator skirt outer diameter (A).
2. Each HVCE extender adds a nominal 100 mm to the creepage length. As a general recommendation, TE advises a 20 percent increase in existing creepage distance.
3. For applications that do not fall within the ranges above, contact your local TE representative.
4. HVCE does not upgrade the voltage class of the insulator.
5. Related test reports: UVR-8138, UVR-8144, UVR-8037, EDR-5350

HVCE-WA

High Voltage Wraparound Creepage Extenders

Each extender is tailored to suit the insulator or bushing profile used. There is a wide range of extenders already available, many of which fit the more commonly used profiles.

The range already covers many insulator and bushing profiles from approximately 200 mm to 600 mm in diameter. There is no upper voltage limit to the use of creepage extenders with applications in use >250 kV a.c. and d.c.

Selection Information: dimensions in millimeters

In order to select the appropriate size of HVCE, an insulator or section of an insulator must be obtained. Then measure accurately the dimensions of the shed diameter and outside profile of the shed at its farthest point. This can be done by breaking a piece of porcelain off of the insulator or by using a profile gauge. The vital measurements needed to select a creepage extender are shown below. The illustration (Diagram B) shows an example of a typical cross section of an HVCE with the dimensions representing that of the insulator profile.

A selection chart of already designed HVCE-WA's is available, for assistance please contact your local TE Representative.

		Each HVCE-WA extender adds nominal 150 mm to the creepage length. As a general recommendation, TE Connectivity advises a 20% increase in existing creepage distance. Use the formula below to calculate the number of creepage extenders required: Existing creepage x 0,2 ÷ 150 = minimum number of creepers required ie) 1,500 x 0,2 ÷ 150 = 2 HVCE-WA's Always round up to the nearest whole number, ie) 1,33 = 2 HVCE-WA's
--	--	---

Product Information

HVCE-WA does not upgrade the voltage class of the insulator or bushing.

HVBS

High Voltage Booster Shed

The Booster Shed is a loose fitting collar made from Raysulate anti-tracking polymer which is spaced from the porcelain skirt by short pegs and from the insulator core by spacers. Booster sheds prevent “heavy wetting” flashover by breaking up the water cascades from skirt to skirt. Booster sheds have also been proven to prevent ice-cascade-induced flashovers.

APPLICATIONS

- Circuit breaker bushings.
- Bus support isulators.
- Surge arresters.
- Transformer bushings

KEY FEATURES

- Wraparound installation speeds installation time since the connections don't need to be disconnected.
- Superior UV resistance.
- Anti-tracking material.

RRGS

Polymeric and Porcelain Rigid Red Guano Shield

The rigid red guano shield protects against bird streamer caused outages. There are designs to fit both porcelain bells and polymeric insulators. This two piece shield attaches easily with plastic bolts and nuts around the top of the insulator and provides protection from fecal contaminates coming from above the insulator string. For both applications there are 450 mm and 600 mm diameter shield designs.

Superior high-voltage outdoor materials are used in the RRGs shield design. The rugged, non-tracking, UV-resistant, high temperature polymer ensures long-term performance even in the most extreme environmental conditions.

There are a wide range of problems related to fecal contamination on other equipment arrangements. For further assistance, contact your local TE representative.

Protection, Repair and Maintenance

Raysulate applications

The Raysulate electrical insulation family of products offers easy-to-install busbar insulation systems for both the field engineer and the manufacturer. Raysulate electrical insulation products provide flashover protection against the accidental bridging of conductors commonly caused by birds and animals.

The system is ideal for both enclosed and exposed bus work and for connections in switchgear, substations, and other electrical apparatus. It also permits clearance reduction in many applications.

EXCELLENT ELECTRICAL AND THERMAL PERFORMANCE

Raysulate electrical insulation products are manufactured from high dielectric strength, radiation-crosslinked, heat-shrinkable and cold applied materials. The high-voltage materials are specially formulated to provide high resistance to arcing and tracking. All high-voltage and low-voltage materials provide high-thermal endurance throughout the range of switchgear operating temperatures. They offer field-proven reliability and long service life in harsh environments. In addition, these heat-shrink tubing, tape, and sheet products can be preformed and preshrunk in the customer's workshop, allowing easy, quick installation in the field.

COMPATIBILITY WITH OTHER INSULATING MATERIALS

All Raysulate heat-shrinkable and cold applied electrical insulation products are compatible with other solid switchgear insulating materials. Raysulate electrical insulating materials are not subject to stress crazing or embrittlement and are not adversely affected by common plasticizers used in conventional switchgear insulating materials.

FLAME-RETARDANT MATERIALS

Most Raysulate insulating materials pass the ANSI C37.20 switchgear insulation flammability tests.

Protection of Outdoor Equipment

Raysulate applications

For Protection, Repair and Maintenance

FOR PROTECTION, REPAIR, AND MAINTENANCE

Raysulate heat-shrinkable electrical and cold applied insulating tubes, tapes, and sheets provide a complete system for electrical repair and maintenance of enclosed or exposed buswork and for connections in switchgear and electrical equipment. They offer:

- Fast, easy installation and removal
- A flexible system to cover most conductor shapes and sizes
- Consistent, reliable installation
- Consistently high electrical and thermal performance
- Compatibility with conventional solid insulating materials
- Protection against flashovers
- Protection for endangered wildlife
- TE Connectivity assistance and support for testing and applications

For the Electrical Equipment Manufacturers

FOR THE ELECTRICAL EQUIPMENT MANUFACTURERS

The Raysulate system of insulation-enhancement components addresses the needs of electrical equipment manufacturers. The superior material properties and versatility of these components enhance the quality and reliability of the final product. Raysulate electrical insulating materials feature:

- Low-hazard formulation
- Flexibility
- Track resistance
- Rugged, easy installation
- Excellent electrical and thermal performance
- Unlimited shelf life

HVIS Bus Insulation Sheet

BBIT/BPTM
Bus Insulation Tubing

HVBT Bus Insulation Tape

Protection of Outdoor Equipment

Raysulate applications

MVLC-18-A/U Overhead Line Cover

FOR OUTDOOR EQUIPMENT

Raysulate electrical insulation products provide a complete system of insulation enhancement for highvoltage busbars and related equipment in outdoor substations and overhead lines. The system offers:

- Easy installation in the field
- Insulation for any different shapes, including busbars, joints, tees, insulators/ bushing connections
- Flashover protection against accidental bridging
- Protection of wildlife and from wildlife-induced outages
- Excellent UV and weathering resistance
- Protection against incidental tree branch contact

TE Connectivity (NYSE: TEL) is a \$14 billion global technology leader. Our connectivity and sensor solutions are essential in today's increasingly connected world. We collaborate with engineers to transform their concepts into creations – redefining what's possible using intelligent, efficient and high-performing TE products and solutions proven in harsh environments. Our 80,000 people, including 7,500 design engineers, partner with customers in over 150 countries across a wide range of industries. We believe EVERY CONNECTION COUNTS – www.TE.com.
